Engineering Project Manager

Do what you love. Create the future you want. Explore the Engineering Project Manager role at Nebulaworks.

NEBULAWORKS

About Nebulaworks

Nebulaworks is a consulting and engineering firm founded, built, and managed by engineers, for engineers. Our mission is to be the best in the world at creating high-performance engineering teams where members are inspired to collaborate openly, incentivized to gather new knowledge and skills, and value simplicity when solving difficult problems.

We believe technological and cultural change starts when the focus is on developing the team's skillset, collaboration, and process to deliver software. The tools come and go, but the right team is invaluable. They possess the foundational knowledge and expertise to reason about any problem, propose numerous reasonable solutions, and identify a low-risk path to proving their hypothesis.

Job Purpose

The Engineering Project Manager (EPM) is responsible for leading and managing agile cloud-based projects within our Clients. This role involves close collaboration with cross-functional teams comprising developers, operations, and business stakeholders to ensure timely and effective delivery of cloud solutions in support of the Client's mission objectives.

You Will

• Implement Agile methodologies and principles in every stage of the project lifecycle, ensuring seamless collaboration   among all involved teams

• Develop and maintains detailed project plans, including milestones, tasks, resources, and timelines

• Communicate project updates to all relevant stakeholders, including senior leadership

• Identify, assess, and mitigate project risks related to the cloud infrastructure and software delivery

• Ensure optimal allocation of both human and technical resources, while keeping the project within budget constraints

• Coordinate with teams to ensure that the cloud-based solutions meet any relevant standards and compliance requirements

• Track key performance indicators to assess project performance and make data-driven decisions

• Confirm all project documentation, such as requirements, architecture diagrams, and end-user

NEBULAWORKS
